THE CHINESE UNIVERSITY OF HONG KONG  
CHINESE MEDICINAL MATERIAL RESEARCH CENTRE

# ● Advances in the Study of the ● Highly Potent Analgesic Dihydroetorphine: from Analgesia to the Treatment for Heroin Addicts

*a seminar presented by*

Prof. Qin Bo-yi  
Academy of Military Medical Sciences, Beijing

Date : April 22, 1993 (Thursday)

Time : 4:00 P.M.

Venue : Room L3, Science Centre

**\*\* ALL INTERESTED ARE WELCOME \*\***

## About the speaker :

"Prof. Qin graduated from the First Medical College of Shanghai in 1955. He was formerly the Director of the Academy of Military Medical Sciences, and is currently the president of Scientific Consultative Commission of the Academy of Military Medical Sciences, the vice president of the Chinese Pharmacological Society, and also an executive member of the National Expert Committee of New Drug Research and Development. He has been engaging in pharmacological and toxicological research of new drugs for a long time and has studied the highly potent analgesics in the last ten years.

## About the seminar :

The lecture, to be delivered in English, will cover the pharmacology, toxicology, dependence and clinical application of dihydroetorphine, a very potent analgesic; the recent advances in the clinical application of dihydroetorphine to treating heroin addicts will also be highlighted. Dihydroetorphine is the first narcotic analgesic successfully developed and approved for production in China."
