新聞稿 PRESS RELEASE

CHINESE UNIVERSITY OFFERS POSTGRADUATE PROGRAMMES IN SYSTEMS ENGINEERING

The Chinese University of Hong Kong announces that applications are now invited for graduate studies in the newly-established Systems Engineering Department. Set up in 1991, the Department admitted its first batch of students last September and will begin to offer M.Phil and Ph.D programmes in August 1992.

Postgraduate courses run by the Systems Engineering Department are diversified and multi-disciplinary. Specialty areas cover electrical control systems, automation and manufacturing technology such as CAD/CAM/CIM, robotics, information systems and operations research.

An open day to introduce the postgraduate programmes of the University's Engineering Faculty will be held tomorrow (Feb 15). The Systems Engineering Department will, together with three other departments in the same faculty (namely Computer Science, Electronic Engineering and Information Engineering), provide a series of talks and tours of laboratories for the visiting students. Interested parties may come to the Lady Shaw Building at The Chinese University at 9:00 am on the day.

Those applying to enrol for postgraduate studies in systems engineering should have a degree (Second Class Honours Upper Division or above) in computer science, engineering, science or other related disciplines. Graduate students will receive financial aid in the form of graduate/research assistantship.

Application forms are now available from the Graduate School at The Chinese University. The deadline for application is February 29, 1992. Further details can be obtained from the Systems Engineering Department by phoning 609-8888, or fax 603-5505.
