新聞稿 PRESS RELEASE

## CHINESE UNIVERSITY'S ENGINEERING FACULTY TO HOLD OPEN DAY FOR POSTGRADUATE PROGRAMMES

The Chinese University's new Faculty of Engineering will hold its second Open Day from 9:00 am to 12:30 pm on Saturday, February 15, 1992 at the Lady Shaw Building to introduce its postgraduate programmes. The first Open Day was held last year and attracted more than 200 students to the campus.

On the scheduled day, Professor Omar Wing, Dean of the Engineering Faculty, and departmental representatives will give a series of talks on individual programmes, the planned development of the Faculty, financial aid and application procedures. They will also answer questions raised by the participants. Guided tours of the laboratories will also be arranged.

The Engineering Faculty currently offers M.Phil and Ph.D programmes in four divisions: Computer Science, Electronic Engineering, Information Engineering and Systems Engineering. The Computer Science and Electronics programmes date back to the 80s and many graduates are now prominent members in the industry. The Information Engineering Department has been admitting postgraduates for two years and its research focus is on telecommunication and communication networks, which have become increasingly important in the industry.

A new Department of Systems Engineering offering specialized courses in computer-aided manufacturing systems has just been set up, and will be admitting its first batch of postgraduate students this September.

The Faculty provides excellent facilities for graduate studies, including some 150 UNIX workstations connected to Internet via a high speed data line. Through this network, researchers can gain access to a huge pool of references and resources in the Internet community. Laboratory facilities in such areas as artificial intelligence, expert systems, CAD/CAM, VLSI circuit design, image processing, signal processing, database systems, and logic programming, are also available.

Interested parties please come to the Lady Shaw Building (Lecture Theatre LT1) at The Chinese University at 9:00 am on the day.
